JetPack

If you're using a [JetPack](link) plan then you're in luck since you already have access to VaultPress (aka Jetpack Backups) – the backup and security plugin developed by Automattic.

While the Personal plan does include brute force protection and uptime monitoring, you will need to upgrade to a Premium plan (starting at about $5/month) to have access to daily Malware scanning for your website (or spring for a Professional plan to have the added benefit of on-demand scans as well as automatic resolutions – so you never have to lift a finger).

Cerber Security, Anti-spam & Malware Scan

WP Cerber offers an all-in-one solution to protect, monitor, and secure a WordPress installation.

The plugin features one of the best malware scanners, offering software to monitor file changes, verify the integrity of WordPress, plugins, and themes, and to remove malicious code and viruses from your website. Once installed, you can choose between a **Quick Scan** and a **Full Scan**. During the Quick Scan, all files with executable extensions are tested for infections. During the Full Scan, all files (including media) are scanned for malicious payloads.

Titan Anti-spam & Security

The plugin offers an all-in-one solution to protect your WordPress website and scan for infected files.

The UI is intuitive. When first installing the plugin, a wizard guides you through the configuration process. The plugin will audit your site, scan for malware, and recommend a few "tweaks" to harden security.

Though Titan does distribute a free version, it's worth noting that most of the exciting features are included in the paid version. T
